**VERSION WITH MARKINGS TO SHOW CHANGES MADE**

**IN THE CLAIMS:**

Please AMEND the following claims:

1. (TWICE AMENDED) A transmission system for transmitting digital signals[, time-division multiplex channels] between an exchange termination and a line termination,

comprising:

an ATM network having user interfaces;

connection units, provided respectively at [wherein both] the exchange termination and the line termination [respectively have a means for connecting] to [a]respectively connect each of the exchange termination and the line termination to one of the user [interface]interfaces of [an]the ATM network; [and]

[means for converting]conversion units provided respectively at the exchange termination and the line terination, to convert time-division multiplex data into ATM cells, or ATM cells into time-division multiplex data[.]; and

[a means for allocating]an allocation unit to allocate a virtual ATM channel to each time-division multiplex channel.

4. (TWICE AMENDED) A [Transmission]transmission system according to claim 1, wherein the [means for converting time-division multiplex data and ATM cells contains]conversion units contain a channel multiplexer/demultiplexer for distributing digital signals of the individual time-division multiplex channels to the respectively allocated ATM cells, or the digital signals from the ATM cells and distribute them into the allocated time-division multiplex channels; said system further comprising an ATM converter for packing items of digital information received from the channel multiplexer/demultiplexer into ATM cells or, respectively, for unpacking ATM cells and emitting the digital information contained therein to the channel multiplexer/demultiplexer, and for inserting ATM cells from this cell stream, and an interface for passing synchronization information of the time-division multiplex signals to the ATM network or, respectively, to receive synchronization information from the ATM network, and pass it to the ATM converter and to the channel multiplexer/demultiplexer.

Please ADD the new claim.

5. (NEW) A transmission system according to claim 1, wherein the ATM network, the connection units, the conversion units and the allocation unit create a V1 reference point

Serial No. 09/117,799

according to ITU-T G.960 between the exchange termination and the line termination.
